### **iFoto Dialer**

Call your contacts rapidly, dial your friends by their photos. Add landscape mode to your smart dialer: dial by photos.

NogaSoft and iPhSoft announces that iFoto Dialer, Contact App replacement for the iPhone, which allows to dial your contacts quicker and easier is now available for **free download**. iFoto Dialer is a two in one product that combines smart dialer capabilities with photo based dialing.

Upon launch, iFoto Dialer presents a generic number keypad that looks much like the original one. You can use this keypad to make phone calls in a similar way like any other number keypad, but it is also capable of finding contacts. If you have a contact named John Goodchild Dow, typing the number keys corresponding to the few of letters of his first or last name, will bring up the contact on the keypad, ready to be dialed. For example: type the numbers '5646' to find 'John'.

### Smart Keypad Dialer

## Photo Dialer

Rotate the device to landscape in order to toggle the Photo dial mode. This mode gives the ability to initiate calls simply by tapping a photo of a contact. Use this mode to conveniently call often called contacts such as friends and family.

### Features

- Dial numbers as you normally would.
- Search contact by first name, last name, or company name - all at once.
- When searching contact, there's no need to tap a given key multiple times for a single letter (to search for "B", just hit the 2 button once, not twice).
- Favorite screen with 12 contacts. Tap the contact's picture to dial.
- Set the first / last name display order.
- Select the sound of a keypad press. It can be either DTMF or Voice.
- English (Latin), Russian (Cyrillic), Arabic and Hebrew keypads.
